YOSSEF MOHAMED EL-SAYED KHALIL

MIS Graduate | AI-Directed Development | Project Coordination

Alexandria, Egypt | yossefkhalil.eg@gmail.com | +201223755058 | Portfolio | GitHub | LinkedIn

PROFILE

MIS graduate (Alexandria University, GPA 3.45/4.0) who leads small technical teams and takes products from requirements to live deployment. Coordinated a 13-member team to deliver Manzili, a multi-vendor e-commerce platform with 5+ payment, logistics and AI integrations, deployed on AWS, Supabase and Vercel. Uses AI-assisted development to cover a broad stack quickly, and delivers under pressure: built a working AI audit agent in 24 hours, ranking in the top 1,000 of ~52,000 hackathon participants. Also built a bilingual clinic EHR for a charity which is in production now, and has run a family online store on Noon and Amazon.eg since 2022, which keeps the technical work grounded in real business needs. Actively learning Python, automation and AI.

CORE CAPABILITIES

- Project management and team leadership
- Cross-functional coordination and deadline management
- AI-directed and AI-assisted development
- Requirements analysis and solution planning
- Software architecture and system design
- Linux and Windows administration
- Networking, hosting and website deployment
- N8N Automation and technical support
- Hardware consulting and custom PC builds
- Third-party integrations and REST APIs
- Python, SQL, Docker, AWS and Supabase
- Git and GitHub version control
- Testing, deployment and delivery ownership
- Deadline and pressure management
- Business analytics and Excel
- UI/UX design and research
- E-commerce and inventory management
- Arabic (native) and English (intermediate)

EDUCATION

Bachelor's - Management Information Systems | Alexandria University, Faculty of Business — 2026 | GPA: 3.45/4.0 (A-)

PROJECTS

Manzili | Multi-Vendor E-Commerce Platform | Graduation Project — Jun 2026

Live demo | GitHub repo | YouTube trailer | Documentation

- Project orchestrator and team lead for a 13-member graduation team, assigning work, tracking deadlines and coordinating delivery from requirements through deployment.
- Owned solution planning, testing and third-party integrations, and worked closely with our senior instructor to keep the team aligned and the delivery on schedule.
- The platform runs on a roughly 50-table relational model with 5+ external services (Stripe, Kashier, Cloudinary, Bosta and cloud LLMs), JWT/BCrypt authentication and Docker, deployed on AWS/Supabase and Vercel.

AI-DA System | HackerRank Hackathon (Ghost Data Still Exists) — Oct 2026

GitHub repo | Problem statement

- An AI-powered deletion-audit agent that verifies whether personal data was truly deleted across databases, logs, backups and sync paths, modelled on a $2.4M ghost-data failure.
- Built in 24 hours on free-tier tools only, it ranked in the top 1,000 of roughly 52,000 participants.

Clinic EHR System | Volunteer Charity Project — Ongoing

Live demo | GitHub repo

- Replaced a charity clinic's legacy Laravel records app with a cloud-native EHR on Supabase and Cloudflare, now live in production.
- Beyond the original Laravel feature set, it adds a 17-field patient registry, visit history, clinical notes, attachments, financial reporting, Excel export and Arabic-aware search, with per-section role-based access.
- And an AI import agent that reads spreadsheets, PDFs and photographed notes for automated bulk patient importing, powered by browser-local LLMs to keep patient data on the clinic PC. Row-level security protects every table, and 646 automated tests plus CI guard each release.

Meowdoro | Gamified Productivity Web App | University Project — 2025

Live demo | GitHub repo

- Team lead for 11 people, assigning tasks and coordinating delivery while leading development with AI-assisted tooling.
- Shipped a live productivity app that combines a Pomodoro timer, a Google Keep style note-taking space and a gamified AI study companion.

NIVIX | Local-First AI Agent Architecture (Concept) | Personal Project — Ongoing

- Designing a local-first AI agent architecture that covers research, tool use, memory, coding, automation and homelab control, with sandboxing to contain AI actions.
- The long-term goal is an all-in-one AI co-worker running on my own hardware.

VanillaCrafta | Large-Scale Minecraft Project | Personal Project — Ongoing

- Tuned a roughly 800-mod Minecraft pack to resolve mod conflicts, crashes and compatibility issues, cutting RAM use by about 60 percent, from 11GB to 4GB.

WORK EXPERIENCE

Online Store Manager | GY Fashion (Family Business) — **2022 - Present**

- Manage the online storefront for a family-run fashion business on Noon, Amazon.eg and WhatsApp Business. Responsible for product listings, pricing and customer inquiries, along with order processing and inventory coordination.
